ABOUT THE COMPANY

Compsoft Technologies

-Providing a Complete Suite of IT Services

The vision and mission of the company is:

VISION

We are committed to going the extra mile to bring success to the clients consistently .We are dedicated to delivering the right people, solutions, and services to the clients that they require to meet their technology challenges and business goals.

MISSION

Optimizing client satisfaction with quality services .Delivering the most efficient and the best solution to our clients to every client leveraging leading technologies & industry best practices.

Some of their services include:

-  **Development**
-  **Branding and Design**
-  **Search Engine Optimization**
-  **Conent System**
-  **Research**
-  **Embedded System and IOT**

STORE MY RESULTS

OVERVIEW OF THE PROJECT

Project Name: “STORE MY RESULTS”

Team Members: RASHMITHA SOUMYA SINDU R

NANDINI .M

KOUSHIK .M G

SHARON .R

Modern web browsers support a number of ways for web sites to store data on the user's computer.

— with the user's permission

— then retrieve it when necessary.

- This lets you persist data for long-term storage, save sites or documents for offline use , retain user- specific settings for your site, and more.
- Most major modern web sites are dynamic — they store data on the server using some kind of database (server-side storage), then run server-side code to retrieve needed data.
- Client-side storage works on similar principles, but has different uses. It consists of JavaScript APIs that allow you to store data on the client (i.e. on the user's machine) and then retrieve it when needed.

STORE MY RESULTS

This has many distinct uses, such as:

- Personalizing site preferences (e.g. showing a user's choice of custom widgets, color scheme, or font size).
- Persisting previous site activity (e.g. storing the contents of a shopping cart from a previous session, remembering if a user was previously logged in).
- Saving data and assets locally so a site will be quicker (and potentially less expensive) to download, or be usable without a network connection.
- Saving web application generated documents locally for use offline
- Often client-side and server-side storage are used together. For example, you could download results whenever needed store them inside a client-side database, and play them as needed. The user would only have to download the results once — on subsequent visits they would be retrieved from the database instead.

STORE MY RESULTS

STORE MY RESULTS

Students nowadays don't have the habit of remembering their previous semester marks. This can actually cause a huge problem to students in their final year of Engineering if switching companies is taking place, in order to solve this, we here at storemyresults.com would love to provide a platform to students/Graduates to store their results of the previous/current semester thereby making it comfortable to access results and marks accessible whenever required. Majority of students don't even remember the marks of their current semester and the sophisticated design of result websites make it a little difficult to access the same. The working process is simple here we ask students(user) to create an account with us and we tend to store the data that they enter. The details should be properly entered, failing which, the existing records have to be deleted and the new entries of the respective semester have to be made. The data of the user is completely secured and (s)he has to make an account and set their password to access their account at any point in time. The user has to make note of the details for further login, failing which, new account has to be created with different credentials. The data might include USN, NAME, SUBJECT NAMES, SUBJECT CODES with their finalized marks. Once that is done we have a download option wherein the users/students can submit their responses, the content of the webpage at the time of submission is downloaded in pdf form for their reference. This will make it easier for the students to retrieve their results or marks of any subject of any semester anytime.

STORE MY RESULTS

FLOW OF THE WEBSITE

1. The user/student has to signup,if already a member they can login.
2. Make note of the credentials at the time of signup for future login,failing which new account has to be created with different credentials.
3. After signup ,the user has to login to enter the details .User can navigate through various sections in the navigation bar ,i.e, Home, Login,Signup,Department,Subject,Download,Logout.
4. The student has to enter the details properly ,incase of any wrong entries,the user has to delete the wrong entries and new entries has to be made from the beginning.

STORE MY RESULTS

TOOLS USED

Software Requirements

- Visual Studio Code 2019.
- Google Chrome or Microsoft Edge of latest version.
- Front End: HTML, CSS, JS (optional)
- Linux 7.1 or Windows XP/7/8/10 OS or Mac OS

Hardware Requirements

- Pentium 200-MHz computer with a minimum of 64 MB of RAM (128 MB of RAM recommended).
- Monitor with a refresh rate of at least 40Hz for a smooth GUI experience (optional).
